

Superior Clamping and Gripping

Product Information

Collaborating gripper for small components Co-act EGP-C 25

Co-act EGP-C

Collaborating gripper for small components

Collaborative. Powerful. Certified.

Co-act EGP-C gripper

Electric 2-finger parallel gripper certified for collaborative operation with actuation via 24 V and digital I/O

Field of application

Gripping and moving small and medium-sized workpieces with flexible force in collaborative operation in the areas of assembly, electronics and machine tool loading.

Advantages – Your benefits

Certified gripping unit saves effort for safety assessment of the application

Functional safety ensured due to inherent safety with current limitation

Pre-assembled gripping unit with robot interface for a easy and fast integration

Plug & Work for a variety of different cobots

Integrated status display For a visual indicator of the application state

Service flaps in the collision protection cover fitted to adjust the gripping force and the sensor system

Control via digital I/O for easy commissioning and rapid integration into existing systems.

Brushless DC servomotor for almost wear-free use and a long service life

Attachment fingers available with three different inserts

Sizes
Quantity: 4

Weight
0.36 .. 1.38 kg

Gripping force
40 .. 230 N

Stroke per jaw
3 .. 10 mm

Workpiece weight
0.2 .. 1.15 kg

Functional description

The Co-act EGP-C gripper is electrically driven and has an integrated current limitation and collision protective cover. The current limitation ensures that the gripping force does not exceed a defined value. The collision

protective cover serves for minimizing the risk of injury during the use in collaborative operations.

- ① **Collision protection**
- ② **Gripper for small components EGP**
- ③ **Flange**
with integrated electronics and cabling
- ④ **LED strip light**
for status display
- ⑤ **Integrated sensor system**
to monitor the jaw position
- ⑥ **Service flap sensor system**
for adjusting the sensor system
- ⑦ **Service flap gripping force**
for adjusting the gripping force

Co-act EGP-C

Collaborating gripper for small components

Detailed functional description

Observation of the gripping force in collaborative operation

The "gripping force" specification in the catalog refers to the arithmetic sum of the forces acting on each jaw individually at distance P (see illustration). For evaluation of the biomechanical limit values in accordance with ISO/TS 15066, only the gripping force acting on each gripper jaw must be used. Furthermore, the information in the operating manual is referred to.

- 1 Co-act EGP-C gripper
- 2 Gripper jaws (customized)
- 3 Gripping force applied to each gripper jaw
- 4 Workpiece

Simple assembly of the Co-act EGP-C

The Co-act EGP-C gripper was developed for simple assembly on collaborative robots (cobots). During assembly, the enclosed adapter plate has to be fastened with the supplied fastening material to the flange of the cobot. Subsequently, the gripper can be fastened with the enclosed hexagon socket wrench to the adapter flange. Finally, the electric connection (not version KETI) must be established.

- 1 Co-act EGP-C gripper
- 2 Hexagon socket wrench
- 3 Adapter flange
- 4 Mounting material
- 5 Flange of the cobot

Simple plug & work on several cobots

The standard Co-act gripper EGP-C is available for a wide range of collaborative robots (cobots) from a variety of manufacturers including KUKA, Universal Robots and FANUC. The gripper has been pre-configured in a way that it can be mounted directly electrically and mechanically onto the cobots. Depending on the manufacturer, different versions are also available depending on the flange version.

- 1 Co-act-EGP-C gripper to KUKA LBR iiwa
- 2 Co-act EGP-C gripper to FANUC CR-7iA
- 3 Co-act EGP-C grippers to UR

Co-act EGP-C for Universal Robots

For the robots of the manufacturers Universal Robots and Techman Robot, two variants of the Co-act EGP-C gripper are available. The variants -URID or -TMID use the tool interface of the robot for feed-through of the signals to the robot control system. However, this variant does not have a light band. The light band including the free actuation cannot be used for the variant with external cable routing.

- 1 Co-act EGP-C to UR using the tool interface (version-URID)
- 2 Co-act EGP-C to UR with external cable routing (version-UREK)

Co-act EGP-C

Collaborating gripper for small components

General notes about the series

Operating principle: Rack and pinion principle

Housing material: Polyamide with glass fiber additive

Base jaw material: Steel

Actuation: servo-electric, via brushless DC servomotor

Warranty: see assembly and operating manual

Scope of delivery: Accessory pack with adapter flange, mounting material and hexagon socket wrench, assembly and operating manual with declaration of conformity and incorporation, safety information

Gripping force: is the arithmetic total of the gripping force applied to each gripper jaw at distance P (see illustration). For more information, see the detailed functional description.

Finger length: is measured from the reference surface as the distance P in direction to the main axis.

Repeat accuracy: is defined as a distribution of the end Position for 100 consecutive strokes.

Workpiece weight: is calculated for force-fit gripping with a coefficient of static friction of 0.1 and a safety factor of 2 against workpiece slippage at acceleration due to gravity g. For form-fit or capture gripping, there are significantly higher permissible workpiece weights. For more information, see assembly and operating manual.

Closing and opening times: are purely the times that the base jaws or fingers are in motion. PLC reaction times are not included in the above-mentioned times and must be taken into consideration when determining cycle times.

Application example

Collaborating gripper unit to support the worker when feeding in and positioning workpieces.

Options and special information

Light band for variants for Universal Robots, Techman Robot and FANUC: Actuation of the light band is possible for the variants –UREK for Universal Robots, –TMEK for Techman Robot, and –FCRXEK for FANUC with external cabling. Digital signals for actuation are not available for the variants –URID, –TMID and –FCRXID. For FANUC (variant –FCR7), use of the light band is possible for direct connection of the gripper to the robot control system. For the connection via the EE interface, the actuation of the light band is not provided.

Manually adjustable gripping force: With an integrated rotary switch, the gripping force can be adjusted for the Co-act EGP-C 40 in four stages from 100%, 75%, 50%, and 25%. To adjust the gripping force, the service flap must be opened.

Integrated sensor system: The gripper has two integrated inductive proximity switches. With them, the "open" and "closed" position of the gripper is monitored as standard. A sensor can alternatively be used depending on the area for workpiece monitoring. For this, the sensor must be manually adjustable. For this, a service flap must be opened for the size 40.

SAC – safety notes: In the enclosed assembly and operating manual, extensive safety notes on the use of the gripper are also included. The instructions also provide information and recommendations on the overall application.

Weight: The weight comprises the entire Co-act gripper including cable and connecting plug.

Co-act team: The Co-act team from SCHUNK is available to answer further questions at all times with experts on the topic of human/robot collaboration. You can reach the team at +49-7133-103-3444 or e-mail co-act-team@de.schunk.com.
